Regional ITS Operations & Implementation Plan for The Eugene-Springfield Metropolitan Area

Executive Summary

November 2003

Prepared by

DKS Associates

&

IBI Group

In association with

ODOT
Lane County
City of Eugene
City of Springfield
Lane Council of Governments
Lane Transit District
Federal Highway Administration
Many people assisted with the preparation of the *Regional ITS Operations & Implementation Plan for the Eugene-Springfield Metropolitan Area*. DKS Associates wishes to acknowledge the Steering Committee, all of the workshop participants, and the following people for providing valuable input towards the preparation of this plan.

**Project Manager**
Galen McGill  
Oregon Department of Transportation ITS Unit

**Key Program Stakeholders**
Edward Anderson  
Oregon Department of Transportation ITS Unit
Robert Fynn  
Oregon Department of Transportation Region 2
Don Ehrich  
Oregon Department of Transportation District 5
Ed Chastain  
Lane County
Tom Larsen  
City of Eugene
Mike Ferchland  
City of Eugene
Brian Barnett  
City of Springfield
Bud Reiff  
Lane Council of Governments
Thomas Schwetz  
Lane Council of Governments
Steve Parrott  
Lane Transit District
Nathaniel Price  
Federal Highway Administration

**Expanded Stakeholders**
Gary Obery  
Oregon Department of Transportation
Chuck Larsen  
Oregon Department of Transportation
Eric Anderson  
Oregon Department of Transportation
Jason Shaddix  
Oregon Department of Transportation Region 2
Shirley Gardipee  
Oregon Department of Transportation Region 2
Kevin Kinney

List of Figures
  Figure 1. ITS Deployment Plan ............................................. Page 10
A collective effort by the Oregon Department of Transportation (ODOT), Lane County, the City of Eugene, the City of Springfield, the Lane Council of Governments (LCOG), and the Lane Transit District (LTD) has led to the *Regional Intelligent Transportation System (ITS) Operations & Implementation Plan for the Eugene-Springfield Metropolitan Area*. This plan strives to deploy ITS projects, which include advanced technologies and management techniques, to improve the safety and efficiency of the transportation system over the long term. It is also consistent with similar efforts in other regions and statewide to ensure the ITS strategies utilized are integrated and complementary. This document provides the Executive Summary of the Final Report.

**The Problem**

From 1996 to 2001, the amount of annual delay increased from 595 to 1,236 person-hours in the Eugene-Springfield metropolitan area, according to an annual urban mobility report\(^1\). The report also estimates that the annual cost of congestion increased from $10 to $25 million during that same time period. Congestion results in travel delay, reduced productivity, and a frustrated driving public.

The population in Lane County grew 14 percent from 1990 to 2000 according to the 2000 Census, and LCOG’s forecasts in the *TransPlan* indicate that from 1998 to 2015 the population in the Eugene-Springfield metropolitan area will grow 41 percent and employment will grow 43 percent. Other trends predicted by LCOG include a 7.7 percent increase in vehicle miles traveled per capita and a 293 percent increase in congested miles traveled as a percent of total miles traveled (a jump from 2.7 percent of total miles traveled to 10.6 percent). The expected growth in population, employment, and vehicle miles of travel will place an enormous burden on the existing transportation infrastructure.

At the same time, public agencies have come to realize that building new transportation infrastructure as the single means of relieving congestion is not feasible, particularly due to high land and construction costs and environmental constraints. Therefore, a systematic approach is necessary to effectively manage the region’s transportation system and capitalize on the existing infrastructure as the region grows. This includes applying Intelligent Transportation Systems (ITS) in conjunction with new roadway construction.

**The Opportunity**

ITS applications provide a viable opportunity for improving the safety and efficiency of the surface transportation system in the Eugene-Springfield metropolitan area. These applications help improve transportation system operations by performing a function more quickly or reliably or by providing a service that was not previously available. In effect, ITS improves the mobility of people and goods on the existing roadways and also provides the potential for substantial savings on future construction, particularly of highways. It is often easy to overlook the importance of investing in operations, but it is necessary to ensure that the traveling public makes safe and efficient use of existing roadways.

---

What is ITS?
Intelligent Transportation Systems (ITS) involve the application of advanced technologies and proven management techniques to solve transportation problems, enhance safety, provide services to travelers, and assist transportation system operators in implementing suitable traffic management strategies. ITS focuses on increasing the efficiency of existing transportation infrastructure, which enhances the overall system performance and reduces the need to add capacity (e.g., travel lanes). Efficiency is achieved by providing services and information to travelers so they can (and will) make better travel decisions and to transportation system operators so they can better manage the system.

Why Develop an ITS Plan?
An ITS plan provides a framework of policies, procedures, and strategies for integration of a region’s existing resources to effectively meet future regional transportation needs and expectations. The following reasons provide the basis for developing an ITS plan for the Eugene-Springfield metropolitan area:

- The region cannot build itself out of congestion.
- The region endeavors to maximize the efficiencies and improve the safety of the existing infrastructure.
- The public demands better information about traffic congestion.
- The plan fosters multi-agency coordination for system operations.
- The Federal Highway Administration requires that all ITS projects funded through the Highway Trust Fund shall be in conformance with the National ITS Architecture and applicable standards.

What are the Expected Benefits?
Intelligent Transportation System projects are aimed at improving the safety and operational efficiency of our existing transportation infrastructure by reducing vehicle delays related to recurrent and non-recurrent congestion, reducing accidents and incident response times, and providing travelers with real-time information to make informed route and mode choice decisions. Quantifiable benefits resulting from Intelligent Transportation Systems include:

- Reduced vehicle delays
- Reduced accidents
- Improved air quality
- Reduced fuel consumption
- Improved travel times

Other accrued benefits, which are more difficult to quantify, include reduced driver frustration and reduced driver anxiety from having real-time travel information. Additionally, improved efficiency due to coordinated and cooperative agency actions can produce long term savings, particularly in relation to coordinating regional projects and a coordinated regional response to incidents.
To estimate the potential benefits resulting from the proposed projects within this plan, the ITS Deployment Analysis System (IDAS), developed by the Federal Highway Administration, was used. This software uses the regional travel demand model for the base conditions and proposed ITS projects can be deployed onto the existing Eugene-Springfield network. The software identifies the resulting potential reduction in delays, fuel consumption, emissions and accidents deployed within the network. Based on this benefits analysis, the potential benefits associated with the proposed 10-year deployment plan are significant. Overall, the expected benefit-to-cost ratio for the implementation of the full 10-year plan is approximately 10 to 1. The table at right summarizes the expected benefits for the forecast year 2015 as they relate to our project goals. This section also includes example benefits from other projects around the State and the County.

**Coordinated Signal Timings**

State-of-the-art traffic signal systems, with communication to a central computer and coordinated signal timing plans have proven to produce substantial benefits to the public. Examples from local coordinated signal timing projects in Oregon have produced the following benefits:

- 10- to 40-percent reduction in stops
- 5- to 25-percent reduction in travel time
- 15- to 45-percent reduction in delay
- Up to 15-percent reduction in fuel consumption

**Ramp Meters**

Ramp meters are used to regulate the flow of traffic onto a freeway. The purpose of a ramp meter is to smooth the flow of traffic on the freeway and to reduce accidents resulting from merging conflicts. In 2000, Minneapolis, Minnesota shut down all of its ramp meters and performed a benefits assessment. The results of this assessment showed ramp meters were responsible for:

- 21-percent reduction in crashes
- 22-percent decrease in travel times
- 10-percent increase in the volume of traffic accommodated by area freeways

**Incident Management**

The Oregon Department of Transportation in association with the Oregon State Police currently operates an incident management program in Region 2 to assist disabled vehicles. The incident management program includes incident response vehicles that patrol the Region 2 roadways to assist motorists and reduce the duration of incidents and reduce the resulting traffic congestion. Based on a recent evaluation of the program, the following benefits have been produced:

- 15-percent reduction in average incident duration
- 35-percent reduction in vehicle-hours incident delay

---

Traveler Information
The dissemination of real-time traveler information provides travelers the ability to make informed travel choices, which could include changing a route, or selecting an alternate mode of travel. The resulting benefits include:

- 7- to 12- percent reduction in travel time
- Up to 33- percent reduction in emissions

Cost Comparison
ITS components can be deployed throughout the Eugene-Springfield Metropolitan area for a fraction of the cost of large construction projects.

Project Approach
The figure below illustrates the project approach for the development of an ITS plan for the Eugene-Springfield metropolitan area. The stakeholder outreach program has been an integral part of developing a cooperative plan that meets regional needs regardless of jurisdiction.

A Steering Committee composed of key stakeholders from regional transportation agencies guided the project with additional input from expanded stakeholders that represented local emergency management agencies, the City of Coburg, and the University of Oregon. Key stakeholder outreach activities included the following:

- Monthly Steering Committee meetings
- Interviews with key stakeholders to collect transportation user needs information
- Two expanded stakeholder meetings (User Needs and Deployment Plan)

The following sections describe the results of the plan process for the 20-year Eugene-Springfield ITS Plan, with particular focus on these six interest areas:

- Travel & Traffic Management
- Communications
- Public Transportation Management
- Emergency Management
- Information Management
- Maintenance & Construction Management
Our Mission Statement is:

The Eugene-Springfield area strives to enhance the safety and efficiency of multi-modal travel through the use of advanced technologies, transportation management techniques, agency coordination, and partnerships.

The following project goals and objectives were developed to obtain our mission:

**Goal #1: Build consensus and improve coordination among project stakeholders.**
- Build consensus among the Steering Committee members.
- Build a coalition among all ITS stakeholders in the Eugene-Springfield metropolitan area.
- Share resources between local and regional agencies.
- Coordinate and integrate projects with other agencies.
- Promote public and private partnerships for ITS deployment, operations, and maintenance.
- Develop a concept of operations with a seamless interface between agencies.

**Goal #2: Improve and maintain a safe transportation system.**
- Reduce frequency, duration, and effects of incidents.
- Reduce emergency response times.
- Reduce recurrent congestion.
- Coordinate incident response with other local and regional agencies.

**Goal #3: Improve the efficiency of the transportation system.**
- Improve travel time for vehicles, including transit vehicles.
- Reduce travel time variability.
- Reduce fuel consumption and environmental impacts.
- Improve transit service reliability.
- Improve maintenance and operations efficiencies.

**Goal #4: Deploy functional and cost efficient ITS infrastructure.**
- Deploy systems that fit in with future improvements.
- Deploy systems with a high benefit-to-cost ratio.
- Deploy systems that maximize the use of existing infrastructure.
- Deploy systems with minimal use of maintenance and operational support.
- Integrate deployments with other local and regional projects.

**Goal #5: Develop a commitment to ITS deployment in the Eugene-Springfield area.**
- Create a regional architecture that complements the statewide architecture.
- Develop a phased implementation process based on a prioritized project list.
- Identify unique funding in addition to utilizing traditional funding sources.
- Develop a process that ensures program continuation.
- Integrate the ITS Plan with the Central Lane TMA regional transportation plan and other transportation plans in the region.
The National ITS Architecture and the Oregon Statewide ITS Architecture provide the basis for the Eugene-Springfield ITS Architecture. The figure below depicts the physical architecture for the Eugene-Springfield metropolitan area and includes key stakeholders, existing and desired services (or ITS elements), and the necessary interconnections and information flows required to ensure system compatibility and interoperability.

Providing compatibility amongst jurisdictions will enable the region to fully maximize the use of ITS technologies. For example, an LTD bus traveling along ORE 126 must be able to communicate with the traffic signals in both the cities of Eugene and Springfield to allow for transit signal priority. The physical architecture ensures this happens by identifying the connection to the appropriate agencies (i.e. LTD, City of Eugene, and City of Springfield) and their equipment (i.e. traffic signals and transit vehicles) and the information required to provide the desired service (i.e. transit signal priority).

**Eugene-Springfield Physical ITS Architecture**

**Concept of Operations**

The concept of operations, which supplements the ITS physical architecture, defines the roles and responsibilities of the participating transportation and public safety agencies and identifies information flows between the agencies in the Eugene-Springfield metropolitan area. The concept of operations defines the responsibilities of the various agencies providing ITS services in the region for activities such as design, construction, integration, planning, operations and maintenance. In addition, the concept of operations defines the level and types of information shared between agencies such as data, video, status, request and control.
The Eugene-Springfield Deployment Plan is organized into three time frames: 0-5 years, 6-10 years, and 11-20 years. Based on stakeholder input and key findings from system evaluations, the projects recommended for implementation in the Eugene-Springfield metropolitan area have been organized and described by the following program areas:

- Travel & Traffic Management (TM)
- Communications (CO)
- Public Transportation Management (PTM)
- Emergency Management (EM)
- Information Management (IM)
- Maintenance & Construction Management (MC)

Each program area is described on the following pages, with additional details in Tables 1 - 4 about projects included in the 5-Year Plan. A key component of the 5-Year Plan is the implementation of traveler information collection devices on the primary corridors.

Table 5 summarizes the complete list of projects along with pertinent details. The project numbers used in this table are for reference purposes only and do not indicate any type of priority. A priority of high (H), medium (M), or low (L) is assigned to each project in the table and correlates to the 5-Year Plan, 10-Year Plan, and 20-Year Plan, respectively. Priorities are based on existing and future corridor operation, focusing on recurrent congestion, traffic data, bottlenecks and accident data. Figure 1 provides a graphic summary of the full 20-Year ITS Plan.

**Travel & Traffic Management**

Projects within this Program Area are focused on improving the efficiency and safety of our existing roadway system by providing tools to better manage the existing infrastructure, to coordinate with regional partners and to provide traveler information to the public. The following projects are part of the 5-Year Plan.

**Regional Freeway Congestion Management**

The purpose for these projects is to improve travel time, to reduce incident response time, and to reduce crashes and the effects of crashes. To accomplish this purpose the following items will be deployed in the 5-Year Plan.
**Regional Arterial Congestion Management**

These projects are intended to improve travel time and reduce crashes and the effects of crashes. To accomplish this purpose the following 5-Year Plan items will be deployed.

**Communications**

The Communications system plays an integral part in the deployment of the projects in the other five program areas by providing a network for information flows to and from field devices and stakeholder agencies. There are two projects slated for deployment during the 5-Year Plan: (1) the documentation of communications standards to ensure standardization and compatibility throughout the region and (2) the integration of radio infrastructure amongst regional agencies. For the most part, the communications network needed to support the ITS Plan will be deployed on a project-by-project basis throughout the next 20 years.

**Public Transportation Management**

Public Transportation Management technologies address two major aspects of transit operations: (1) transit traveler information systems and (2) transit agency operations and management. The projects in this category build off of the current LTD effort to deploy vehicle location technologies and a new computer aided dispatch system. Some of the benefits of these projects include more reliable bus travel times and improved transit traveler information. These 5-Year Plan projects include:
Emergency Management
The purpose of the Emergency Management projects is to reduce emergency response times and to integrate emergency management with transportation and transit management. The emergency response projects included in the ITS Plan are highly dependent on the deployment of key travel and traffic management and communications projects, therefore none of these projects are included in the 5-Year Plan.

Information Management
A critical part of this ITS Plan includes collecting, archiving, and managing all sorts of transportation-related data. Since much of the data collection is closely tied to projects that deploy field devices and systems to collect data, the main information management project has been included in the 10-Year Plan.

Maintenance & Construction Management
These projects are aimed at improving the safety of motorists and workers in construction zones. In addition, these projects are aimed at improving the efficiency of work zone management and control.

</tbody>
</table>
ODOT Region 1 and the City of Portland have successfully developed and deployed an incident management operational plan. The operational plan for I-5 can expand on this and focus on the metropolitan area.

TriMet and the City of Portland have successfully deployed the technology on several corridors in the City of Portland.

### Increased Capacity and Benefits
- **Freeway and arterial corridor information during incidents**
- **Reduced transit delay**
- **Improved integration of throughput during incident conditions**
- **Schedule adherence and reduction in congestion**
- **Reduction in operational reliability**
- **Reduced incident and delay due to incidents**
- **Enhanced transit service and costs**

### Operational Plans

<tbody>
<tr>
<td>ES-TM-06</td>
<td>30th Avenue Signal Timing Coordination near I-5</td>
<td>Project includes signal timing coordination of the two traffic signals on 30th Avenue at the east end of Lane Community College. Conduit currently exists between these two signals.</td>
<td>H</td>
<td>None</td>
<td>None</td>
<td>$10,000/750</td>
<td></td>
<td>Empty conduit is available between these two signals for the installation of interconnect cable.</td>
</tr>
<tr>
<td>ES-TM-07</td>
<td>Incident Management Operational Plans</td>
<td>Project includes the development of an incident management operational plan that includes the operational protocol for field devices (e.g. CCTV cameras, DMS, and system detection on mainline and alternate routes), the development of incident signal timing plans on alternate arterial routes, and clearly defined agency roles and responsibilities for the following corridors: Franklin Blvd, Main St/S A St, 11th Av, W 13th Av, W 18th Av, River Rd, Pearl St, Willamette St, Amazon Valley River Dr/Willagillespie Rd/Goodpasture Island Rd</td>
<td>H, M, L</td>
<td>None</td>
<td>ES-TM-01; ES-TM-02; ES-TM-03</td>
<td>$65,000/575</td>
<td></td>
<td>ODOT Region 1 and the City of Portland have successfully developed and deployed an incident management operational plan on the I-5 (Stillwater Boulevard corridor). - Alternate routes and some operational procedures have already been established for I-5 as part of the Major Incident Management Plan. The operational plan for I-5 can expand on this and focus on the metropolitan area.</td>
</tr>
<tr>
<td>ES-TM-07A</td>
<td>Incident Notification System</td>
<td>Develop an incident notification system that alerts subscribers when incidents occur as well as the location, the transportation impacts, and the expected duration. Subscribers may include public agencies as well as private companies such as companies representing the media.</td>
<td>H</td>
<td>None</td>
<td>None</td>
<td>$70,000/675</td>
<td></td>
<td>ODOT Region 1 has successfully implemented a pager-based notification system that could be used as a model for the Eugene-Springfield metropolitan area.</td>
</tr>
<tr>
<td>ES-TM-07B</td>
<td>Transit Signal Priority</td>
<td>Give priority at traffic signals only to buses that are behind schedule to support transit operations and schedule adherence. This project includes installing transit priority on the transit fleet as well as upgrading Opticom and traffic signal controllers (as needed) at traffic signals and developing signal timing plans on key corridors.</td>
<td>None</td>
<td>Requires upgrade to Opticom or traffic signal controllers at traffic signals with older models. Also requires the installation of emitters on the transit fleet.</td>
<td>ES-TM-07A</td>
<td>$50,000/475</td>
<td></td>
<td>TriMet and the City of Portland have successfully deployed the technology on several corridors in the City of Portland.</td>
</tr>
<tr>
<td>ES-TM-08</td>
<td>Traffic Signal Interconnect</td>
<td>Install traffic signal interconnect and connect the signals to the QuicNet system at the following locations: Barger Rd, Royal Ave/Rosewater Blvd, Gai Young Rd/Gilham Rd, Geer Ave/Crescent Av, Chambers St, Main St (28th Av to 69th Av), Jasper Rd Extension</td>
<td>H, M, L</td>
<td>None</td>
<td>ES-TM-02; ES-TM-03; ES-TM-03A; ES-TM-03C; ES-TM-02E</td>
<td>$10,000/950</td>
<td></td>
<td>Sections of traffic signal interconnect can be added to the main system when other nearby projects are constructed. Traffic signal interconnect should be included as part of the design of the new Jasper Road extension.</td>
</tr>

</table>
| ES-TM-11       | Integrate Regional Virtual TOC with UO SOS Room | Provide an interface between the Regional Virtual TOC and the UO SOS Room that allows for two-way information sharing, monitoring, and control functions. | M        | ES-TM-01; ES-TM-04 | Requires communications between the Regional Virtual TOC and the UO SOS Room. | $100,000/ $1,000 | ● Information sharing capabilities  
                      ● More effective special event management | The development of the interface will be similar to the emergency management systems interface that will be developed as part of ES-EM-01 |
| ES-TM-12       | Beltline Highway Queue Warning System       | Deploy a queue warning system on eastbound and westbound Beltline Highway near the Willamette River that includes dynamic signing to warn drivers of upcoming queues. | H, M     | ES-TM-03B | None | $85,000/ $7,000 | ● Improved safety  
                      ● Reduced amount of rear-end collisions | This project only requires communications between field devices and only requires communications to the NWTTC if permanent DMS are incorporated. |
| ES-TM-13       | I-5 Bridge Security                        | Project includes the deployment of a bridge surveillance system on the McKenzie River and Willamette River I-5 bridges. | H        | I-5 Bridge Recontruction | Needs to be deployed during I-5 bridge reconstruction. | $430,000/ $6,000 | ● Surveillance and monitoring capabilities  
                      ● Improved homeland security | FHWA plans to issue a technical advisory in 2004 regarding bridge security technology. |
| ES-TM-14       | I-5 Bridge Weather Detection and Deicing System | Project includes the installation of a weather detection system and an automatic deicing system on the McKenzie River and Willamette River I-5 bridges. | H        | I-5 Bridge Recontruction | Needs to be deployed during I-5 bridge reconstruction. | $540,000/ $22,000 | ● Real-time weather and pavement conditions  
                      ● More efficient allocation of maintenance resources during inclement weather | This project can be incorporated with the design of the two I-5 Bridge modifications. |
| ES-TM-15       | Highway Advisory Radio (HAR)               | Deploy a highway advisory radio system that provides traveler information. Project includes both permanent and mobile installations. Permanent installations will be deployed at the five key entry points to the metropolitan area (north, northwest, south, east, and west) and at key central locations. | H        | 2004 – 2007 Draft STIP Key #12942 | Depends on deployment of field equipment (CCTV cameras, system detectors, weather stations, etc..) to collect traveler information. | $350,000/ $10,000 | ● Real-time traveler information  
                      ● En-route information that allows users to make informed travel decisions  
                      ● Reduced congestion and delay  
                      ● Customer satisfaction | WS-DOT has implemented highway advisory radio in southern Washington and can be used as a resource during design and construction. |
| ES-TM-16       | Integrate Regional Traveler Information with TripCheck, 511, and Highway Advisory Radio | Develop an integrated system for disseminating and posting traveler information to TripCheck, 511, and HAR. | H, L     | National State 511 Deployment Project; ES-TM-15 (2004 - 2007 Draft STIP Key #12942) | Depends on deployment of field equipment (CCTV cameras, system detectors, weather stations, etc..) to collect traveler information. | $385,000/ $10,000 | ● Real-time and static traveler information  
                      ● Pre-trip planning capabilities and en-route information that allow users to make informed travel decisions  
                      ● Reduced congestion and delay  
                      ● Customer satisfaction | Requires an interface between agencies in the Eugene-Springfield metropolitan area to TripCheck, the 511 system, and the HAR system. |
| ES-TM-17       | Congestion/Incident Information Mapping    | Develop an incident and congestion flow mapping system that shows travel speeds on study area roadways. | H, L     | ES-TM-02; ES-TM-03 | Depends on deployment of system detectors to monitor travel speeds along roadways. Also depends on an interface with incident management personnel. | $290,000/ $5,000 | ● Reduced congestion and delay  
                      ● Customer satisfaction | The WSDOT Smart Trek (www.smarttrek.org) congestion and incident mapping system can be used as a model for the Eugene-Springfield metropolitan region. |
| ES-TM-18       | Traveler Information at Rest Areas         | Provide real-time traveler information at rest areas north and south of the metropolitan area;  
                                                                                   ● Oak Grove Rest Area (MP 207)  
                                                                                   ● Gettins Creek Rest Area (MP 177) | M        | ES-TM-16 | Depends on deployment of field equipment (CCTV cameras, system detectors, weather stations, etc..) to collect traveler information. | $290,000/ $10,000 | ● Pre-trip planning capabilities that allow users to make informed travel decisions prior to entering the metropolitan area  
                      ● Reduced congestion and delay  
                      ● Customer satisfaction | Real-time information can be disseminated by an internet link to ODOT’s TripCheck web site and/or by a sign advertising the 511 traveler information phone number. |
| ES-TM-19       | Rest Area Surveillance System              | Deploy security surveillance systems, including several cameras, at rest areas north and south of the metropolitan area;  
                                                                                   ● Oak Grove Rest Area (MP 207)  
                                                                                   ● Gettins Creek Rest Area (MP 177) | L        | None | None | Cost included in ES-TM-16 | ● Surveillance and monitoring capabilities  
                      ● Improved security | ODOT Region 1 is currently installing security cameras on the I-5 Columbia River Bridge and similar technology will apply to the rest areas. |

| ES-TM-20       | Advanced Parking Management and Information System | Deploy a parking management system at the following locations to collect real-time parking status information, provide en-route driver information, and electronically manage access to parking facilities:  
- Planned UO Basketball/Event Center  
- UO Autzen Stadium  
- Lane Community College  
- Eugene Airport | L | UO plans to construct a new Basketball/Event Center on their campus in downtown Eugene. | None | $750,000/ $20,000 | Real-time information so travelers can make informed decisions about mode choice and parking  
- Reduced congestion and air pollution near parking lots  
- More efficient use of parking spaces  
- Reduced driver frustration when looking for parking | This project will require training staff at the University of Oregon, Lane Community College, and the Eugene Airport. |
| ES-TM-21       | Road Weather Information Systems (RWIS or "Weather Stations") | Deploy road weather information sites that provide temperature and road conditions at the following locations:  
- Beltline Highway on the Willamette River Bridge  
- I-5 at Coburg Road | M, L | TransPlan Project #906 | None | $140,000/ $5,000 | Real-time weather and pavement conditions  
- More efficient allocation of maintenance resources during inclement weather | ODOT has previous experience with weather stations. |
| ES-TM-22       | Advanced Railroad At-Grade Crossings | Detection of an approaching train will allow the dissemination of advance information to emergency management personnel and travelers to allow them to make an informed decision about route choice.  
Deployment locations include:  
- 28th St/Main St Crossing  
- Centennial Blvd east of 28th St (not yet constructed)  
- Olympic Blvd east of 28th St  
- Irving Rd west of Northwest Expy  
- Irvington Rd west of Northwest Expy  
- 42nd St at Wayzata  
- 42nd St at Weyerhouser | L | TransPlan Project #930 | None | $700,000/ $10,000 | Enhanced safety  
- Real-time railroad activity information  
- Alternate route information for travelers  
- More efficient allocation of emergency response vehicles  
- Reduced emergency response times  
- More efficient transit routing | May be difficult to coordinate with railroad companies for the deployment of detectors within railroad right-of-way. Local agencies may be able to place detectors outside of the railroad right-of-way if the railroad companies are not cooperative. |
| ES-TM-23       | Integrate Freeway Management Systems with Central Signal Systems | Integrate freeway management systems with the City of Eugene and City of Springfield central signal systems to provide seamless traffic flow between freeways and arterials, particularly during incident management. | L | ES-TM-02;  
ES-TM-06;  
ES-TM-07;  
ES-TM-27 | This project should not be implemented until freeway management systems (Project ES-TM-02) are being deployed. | $1,100,000/ $40,000 | Integration of freeway and arterial systems  
- Improved safety and efficiency, therefore reducing delay and emergency response times | The project will require software integration between freeway management systems and each City's central signal system. |
| ES-TM-24       | Upgrade Central Signal System | Upgrade or replace the City of Eugene's and City of Springfield's central signal systems with a central signal system that can be integrated with transit systems (e.g. AVL) and emergency management systems (e.g. AVL) | L | ES-P-TM-06 | This project should not be implemented until the City of Eugene and the City of Springfield determine it is feasible to replace their current QuicNet central signal systems. | $505,000/ $20,000 | More efficient preemption of traffic signals  
- Reduced emergency response times  
- Improved transit schedule adherence | When the central signal system is upgraded, the technology will need to be available to integrate the signals with transit systems and emergency management systems. |

</table>
| ES-TM-25       | Special Event Management Systems | Project includes the deployment of traffic signal timing plans, portable dynamic message signs, and parking management for the following special events:  
- UO Sporting Events  
- Lane County Fair  
- Oregon Country Fair  
- Eugene Celebration  
- Springfield Cruise  
- Springfield Christmas Parade  
- Other Regional Special Events | L | ES-TM-02; ES-TM-03; ES-TM-04; ES-TM-20 | None | $375,000 / $25,000 |  
- Improved safety and efficiency, therefore reducing delay and emergency response times  
- More effective traffic management and special event management  
- Increase in information available to travelers through DMS and the TripCheck web site | Many of the traffic signals in downtown Eugene and Springfield and near UO where many special events take place are already interconnected, which means special event signal timing plans can be implemented without having to deploy communications infrastructure. |
| ES-TM-26       | Integrate Eugene Airport Traveler Information with NWTOC | Provide traveler information about Eugene Springfield roadways at the airport and provide airport information to travelers via TripCheck and dynamic message signs operated by the NWTOC. | L | ES-TM-16 | Requires communications link and interface between the Eugene Airport and the NWTOC. | $260,000 / $20,000 |  
- Real-time and static traveler information  
- Pre-trip planning and en-route information that allow users to make informed travel decisions  
- Reduced congestion and delay  
- Customer satisfaction | Other agency interfaces are being developed as part of the ITS Deployment Plan that can be used as models for interface development. |
| ES-TM-27       | Develop Evacuation Route Plan | Develop an operational plan for an evacuation of the metropolitan area in the case of a major emergency. | H | Lane County Hazard Mitigation Plan; ES-TM-02; ES-TM-03; ES-TM-04; ES-TM-20 | None | $120,000 / $0 |  
- Increased capacity and throughput during emergency evacuation conditions  
- Improved safety and efficiency | This project should be included as part of the Lane County Hazard Mitigation Plan and should address ITS elements. |
|                |                |                     |          |                | Project number and priority |                 |                 |                                           |
|                |                |                     |          |                | ES-TM-02; ES-TM-03; ES-TM-04; ES-TM-20 |                 |                 |                                           |
|                |                |                     |          |                | None | $75,000 / $2,500 |  
- Set of standards ready for implementation on all new projects or reconstruction projects  
- Standardization for multiple regional agencies | This documentation will establish the technical aspects required for establishing a communications network. |
| ES-CO-01       | Document Communications Design Standards | Document design standards for communications in the following areas to ensure standardization, compatibility, connectivity, and reliability between multiple jurisdictional agencies:  
- Conduit construction  
- Cable plant description  
- Minimum number of fibers  
- Network technology  
- Junction boxes  
- Fiber termination panels  
- Fiber connectors  
- Communication hub design  
- Fiber optic testing specification  
- Fiber optic installation specification  
- End electronics | H | This project is essential for ensuring that the communications deployed with other projects in this ITS plan are consistent throughout the metropolitan area and with other regional agencies such as PAN and other fiber consortiums. | None | $75,000 / $2,500 |  
- Set of standards ready for implementation on all new projects or reconstruction projects  
- Standardization for multiple regional agencies | This documentation will establish the technical aspects required for establishing a communications network. |
| ES-CO-02       | Communications Network | Provide a communications network throughout the Eugene-Springfield metropolitan area to allow communications between regional agencies and also ITS devices in the field. | H, M, L | This project is relative to most of the projects included in this ITS plan. | Each piece of the communications network is dependent on the pieces that link the communications line and field equipment back to the NWTOC or ODOT District 5 Offices. | $5,400,000 / $50,000 |  
- Connection between agencies will allow for multi-jurisdictional control, management, coordination, and information sharing  
- Connection to ITS field devices allows for innovative strategies such as arterial management and incident management | Requires the purchase of fiber optic maintenance tools and staff training for fiber maintenance as well as new capital fiber installation. |

</table>
| ES-EM-05       | Incident Response Fleet Management System | Installation of automated vehicle locators (AVL) on incident response vehicles and dissemination of real-time vehicle locations at the NWTOC, and the emergency dispatch centers or EOCs for resource allocation during incidents or emergencies. Project also includes monitoring of incident response vehicle repairs and vehicle replacement schedules. | L         | None                          | None                 | $350,000/ $80,000       | - More efficient management of incident response fleet  
|                 |               |                     |          |                               |                      |                         | - Reduced emergency response times when incident response support is needed | LTD is currently installing automated vehicle locators on its transit fleet and will be a valuable resource for project implementation. |
| ES-TM-01       | Regional Data Management System | Create a data management system for archiving data, collecting real-time data, and accessing data. The system should have geospatial capabilities and data should include traffic counts, speed data, accidents (vehicles, pedestrians, and bicyclists), traffic enforcement data, and incident information. | M         | This project closely relates to projects that deploy field devices and systems to collect transportation related data; ES-TM-01; ES-TM-02; ES-TM-03; ES-TM-05; ES-PMT-06; ES-PMT-09 | This project is dependent on interagency communications and the deployment of field devices to collect data. | $500,000/ $50,000       | - Improved resources for regional modeling, research analysis, planning, and design  
|                 |               |                     |          |                               |                      |                         | - Reduced cost of data collection | This project will make use of data already collected or planned for collection by agencies in the Eugene-Springfield metropolitan area. |
| ES-TM-02       | Integrate Transportation Information with GIS Centerline Project | Update ITS transportation GIS data in accordance with the GIS Centerline Project once it is complete. | H, M, L  | GIS Centerline Project        | None                 | $50,000/ $5,000         | - Improved mapping capabilities  
|                 |               |                     |          |                               |                      |                         | - Improved resources for analysis, planning, and design | The GIS Centerline Project is in the process of combining roadway centerline data and developing regional standards for creating attributable data. |
| ES-MC-01       | Maintenance Fleet Management System | Installation of automated vehicle locators (AVL) on maintenance vehicles and dissemination of real-time vehicle locations at the ODOT District 5 Office and emergency dispatch centers or EOCs for resource allocation during incidents or emergencies. | L         | None                          | None                 | $170,000/ $5,000        | - More efficient management of maintenance fleet  
|                 |               |                     |          |                               |                      |                         | - Reduced emergency response times when maintenance support is needed | LTD is currently installing automated vehicle locators on its transit fleet and will be a valuable resource for project implementation. |
| ES-MC-03       | Construction Zone Safety Enhancements During I-5 Bridge Recontruction | Deploy permanent and/or portable dynamic message signs and electronic driver feedback signs to alert motorists of their travel speed as they approach the work zone for the installation of the I-5 temporary bridges and reconstruction of the I-5 permanent bridges. | H         | I-5 Bridge Reconstruction of the McKenzie and Willamette River Bridges | None                 | $200,000/ $45,000       | - Improved construction zone safety and efficiency  
|                 |               |                     |          |                               |                      |                         | - Heightened safety awareness through driver feedback | New equipment and training would be required for this project. ODOT has acquired portable changeable speed limit signs that may be available for use on this project. |
| ES-MC-04       | Development of Work Zone Management Standards | Develop standards for safety enhancements and management techniques in work zones such as the following:  
|                 |               |                     |          |                               |                      | $400,000/ $10,000       | - Construction and zone scheduling capabilities  
|                 |               | Variable speed limits  
|                 |               | Incident detection and management  
|                 |               | Lane merge controls  
|                 |               | Queue detection and electronic driver feedback signs | H         | None                          | None                 |                         | - Improved resources for planning  
|                 |               |                     |          |                               |                      |                         | - Cost savings through project coordination | The system must allow for quick and easy data input and retrieval to make it efficient for affected agencies to use. |

1 The estimated operations & maintenance (O&M) costs listed in this table are for an annual basis once the project has been deployed.
To successfully implement the proposed ITS plan, the following steps are necessary:

**ITS Program Continuation**

The continuation of the ITS steering committee is possibly the most important item for the successful implementation of the ITS plan. This group should include the key stakeholders from the planning process and should be organized as a new subcommittee to the Transportation Planning Committee (TPC). This group will initiate the steps outlined in this plan, plan projects that fit agencies’ needs, pursue Federal funding opportunities, and monitor/report progress and effectiveness. In addition, a representative from this ITS subcommittee should report current status of the plan implementation at least annually at the Metropolitan Policy Committee (MPC).

**Deploy “Early Winner” Projects**

Another key to the success of ITS in Eugene-Springfield will depend on the deployment of “early winner” projects. A potential “early winner” project includes the deployment of field devices (closed circuit television cameras, count stations, variable message signs, and ramp meters) on Beltline Highway to support regional freeway management and traveler information. This project would also support the current Statewide implementation of the 511 traveler information telephone number by providing real-time information from these field devices.

**Incorporate the ITS Plan in the RTP Update Process**

The ITS Steering Committee plans to incorporate this ITS Plan in the upcoming Regional Transportation Plan (RTP) update process. The ITS devices and communications infrastructure identified in this plan should be installed on corridors concurrently with traditional transportation construction and maintenance projects. This approach will minimize reconstruction, save time and money, and result in the modernization of the regional transportation system. Where applicable, relationships to currently planned regional projects have been identified in Table 5. In addition, the data collection, analysis, operational techniques and information sharing developed through the projects in this plan can become key elements of other regional efforts.

**Do Not Overlook Future Needs if They Fit With Current Opportunities**

The region should pursue a flexible approach to implementing the plan. Opportunities may become present in early years to implement elements of the plan identified for later deployment. These opportunities may be possible due to other funding sources, coordination with roadway construction, coordination with local agency/private initiatives and/or transit priorities. These opportunities should be seized when appropriate.
Define a Revenue Stream

The Eugene-Springfield Metropolitan Area will need to define a revenue stream for construction, operations and maintenance. This plan provides the basis for the funding and identifies opportunities for regional coordination and cost-sharing. The region must dedicate funding sources to implement each increment of the 20-year plan. In addition to the traditional funding sources, other non-traditional sources for funding such as grants from non-profit agencies should be considered.

The total capital, engineering and annual operations/maintenance costs for the ITS program are provided below. The Eugene-Springfield Metropolitan Area will need an on-going commitment to operations and maintenance of the equipment and software to maximize the benefits of the ITS program. The ITS elements proposed within this program require consistent staffing for effective system operation, as well as requiring trained staff to do routine maintenance.
